About me

My goal is the design, deployment and security of network infrastructure. I have a solid grounding in the physical layer, routing and the protocols behind modern networks, and I'm especially interested in how automation and code can modernize network architectures.

I've complemented my degree with certifications from Cisco (networking and cybersecurity), IBM (AI) and Harvard (Python and SQL), and put them into practice in projects such as VitalLink, an end-to-end IoT system over LoRaWAN.

As Vice President of Fòrum Telecos UPC, I coordinate the team behind events with more than 500 students. There I've learned to coordinate people, communicate complex ideas and keep a cool head under pressure.

Education

Bachelor's Degree in Telecommunications Technologies and Services Engineering

UPC · ETSETB

SEPTEMBER 2023 – JUNE 2027

Minor: Specialization in Telematic Systems

Work experience

Fòrum Telecos UPC

OCTOBER 2025 – PRESENT

Vice President of Institutional Communications

MARCH 2026 – PRESENT

- Lead the external relations team: liaison with partner companies and institutions, and tracking of objectives.
- Direct the organization's corporate communication strategy, including social media for the events.

Organizer

OCTOBER 2025 – MARCH 2026

- Organized the Fòrum Telecos UPC and Startup Day 2026 at ETSETB, events that connect university talent with the professional world, leading a team of twenty people.
- Brought together more than 500 students at the Fòrum Telecos UPC and gave visibility to new companies at the Startup Day.

Sales Assistant

JUNE-SEPTEMBER 2023, 2024 AND 2025

Real Madrid Official Store

- Sales and customer advice, mostly in English, at Real Madrid's official stores in Barcelona.
- Stock control and storage, upholding the quality standards expected by an organization such as Real Madrid C.F.
- Preparation and personalization of sportswear during the summer campaigns, with operational responsibility at peak times.

> "Daniel doesn't just do what he is assigned; he looks to improve processes, bring solutions and make a positive impact on the team and the organization.
>
> **Genys Bernabeu** AREA MANAGER · REAL MADRID OFFICIAL STORE, BARCELONA

Projects

OCTOBER 2026

Kreix: offline, encrypted personal finance for Windows and mobile

`Python` `PySide6` `SQLAlchemy` `Pyodide · PWA` `AES · PBKDF2` `Pytest` `PyInstaller`

- Designed and developed a personal finance and investment portfolio app for Windows (Python and PySide6) and mobile that works 100% offline: it imports bank CSV and Excel statements (Imagin, MyInvestor or any other bank, with a wizard that learns their columns) without duplicating transactions, and computes net worth, savings, end-of-month forecast, IRR and TWR.

APRIL 2026

P2P telecommunications system for distributing heavy workloads

`JavaScript` `HyperSwarm` `SmolLM2` `P2P` `HTML`

- Led the development of software for building P2P networks to distribute compute-intensive workloads (LLMs) during HackUPC.
- Implemented the network architecture using JavaScript, HyperSwarm and SmolLM2 for language model integration.
- Designed the HTML user interface to control and manage task distribution across the network.

https://github.com/dasuarezang/HACKUPC-P2P-2026

SEPTEMBER 2025 – DECEMBER 2025

VitalLink: remote health monitoring over LoRaWAN

`Python` `Raspberry Pi` `LoRaWAN` `TTN` `Node-RED` `PostgreSQL` `Next.js`

- Integrated an end-to-end remote health monitoring system, capturing vital signs with BITalino analog sensors over Bluetooth and processing the signal locally on a Raspberry Pi 4 using Python (numpy, biosppy.signals).
- Fully configured the LPWA communication link by connecting the Raspberry Pi over UART to an Arduino MKR 1310, using a LoRaWAN gateway to transmit JSON data over long range to The Things Network (TTN).
- Developed the complete data reception, storage and processing pipeline with Node-RED, MQTT and PostgreSQL (Supabase), including an interactive clinical frontend built with Next.js and Recharts for data visualization.

https://github.com/dasuarezang/VitalLinkIoTProject

JANUARY 2025 – JUNE 2025

Ultrasonic distance measurement system

`Analog electronics` `555` `TL082` `Active filters` `ToF`

- Designed and built the analog hardware for a Time-of-Flight (ToF) based measurement system.
- Implemented the 40 kHz transmission stage using 555 timers and designed a receiver front-end with multiple amplification stages (TL082 series).
- Optimized signal conditioning with active band-pass filters and Schmitt triggers, achieving accuracy at up to 3 meters.

Skills

NETWORKING TCP/IP · Routing & Switching · VLAN · DHCP · DNS · NAT · Wireshark · Cisco Packet Tracer · MQTT · LoRaWAN · IoT

LANGUAGES, WEB & DATABASES
C · Java · Python · HTML5 · CSS3 · Haskell · MATLAB · SQL

INFRASTRUCTURE & OPERATING SYSTEMS
Docker · Kubernetes · Linux · Windows

LANGUAGES
Spanish native · Catalan native · English B2

Certificates

HARVARD UNIVERSITY

CS50's Introduction to Databases with SQL
AUGUST 2026

CS50's Introduction to Programming with Python
AUGUST 2026

IBM SKILLS

AI Fundamentals: Language and Vision in AI
JULY 2026

AI Fundamentals: Foundations for Understanding AI
JULY 2026

CISCO NETWORKING ACADEMY

Introduction to Cybersecurity
JULY 2026

Networking Devices and Initial Configuration
JULY 2026

Networking Basics
JULY 2026
